Public Notice: Water Tower Maintenance and Supply Assurance

The City of Kimball would like to inform residents that we will be temporarily draining our 1-million-gallon water storage tank as part of a scheduled rehabilitation project beginning on Tuesday August 18, 2026. This work is expected to take approximately 6 to 8 weeks to complete.

During this period, the City's three municipal wells will remain fully operational and will continue to supply water at a combined capacity of up to 1.4 million gallons per day. Based on current demand and system capacity, we do not anticipate any disruption to normal water usage.

Residents can expect continued access to water for everyday needs, including bathing, cooking, cleaning, and outdoor use such as lawn watering. Currently, the City does not foresee the need to implement any mandatory water restrictions.

While restrictions are not anticipated, however, if necessary, restrictions will be implemented as needed during the project. We encourage residents to consider simple water-saving practices. These not only help maintain system efficiency during the project but can also reduce monthly water bills:

1. Water lawns early in the morning or later in the evening to reduce evaporation
2. Avoid watering on windy days
3. Fix leaking faucets, toilets, or irrigation systems promptly
4. Run dishwashers and washing machines only with full loads
5. Turn off the tap while brushing teeth or shaving
6. Use a broom instead of a hose to clean driveways and sidewalks
7. Consider using a rain barrel for outdoor watering needs

We will continue to monitor system performance closely throughout the project. Should conditions change, we will provide timely updates and guidance to the public.

We appreciate your understanding as we complete these important improvements to our water infrastructure, which will help ensure long-term reliability and quality of service.

For questions or concerns, please contact the city office at 308-235-3639.
