CITY OF KIMBALL
Public Notice: Water System Operations Update

The City of Kimball would like to provide residents with an update regarding the ongoing water tower rehabilitation project.

The City's 1-million-gallon water storage tank has now been **fully drained**, and rehabilitation work is underway. While the tank is out of service, the City's municipal wells are supplying and pressurizing the water system.

As part of this temporary operating configuration, **pressure relief valves have been installed on select fire hydrants throughout the community** to help safely manage water pressure within the system.

Residents may notice **water leaking or discharging from some of these pressure relief valves. Please do not be alarmed.** Due to system pressure, a few of the valves are currently leaking. **The City is aware of these locations, and this does not indicate a water emergency or a problem with the hydrant.**

City staff are **monitoring the water system continuously** while the storage tank is out of service. Any pressure relief valves that are leaking are being watched and will be repaired or adjusted as necessary.

At this time, the City's wells remain operational, the water system is functioning as intended, and **there is no anticipated disruption to normal water service.**

We appreciate the public's patience and understanding while this important rehabilitation work is completed. The City will continue to provide updates if conditions change or additional information becomes necessary.

For questions or concerns, please contact the City of Kimball at **308-235-3639**.
